

Asymmetry of II: $Y = X^2$ — X determines Y , but not vice versa

$X \rightarrow Y$: NN in X stay close in Y

$\widehat{II}_n(X \rightarrow Y) \approx 0.146$ (small)

$Y \rightarrow X$: NN in Y can be far in X

$\widehat{II}_n(Y \rightarrow X) \approx 0.807$ (large)
